EDUCATION

Arizona State University | Tempe, AZ **Completion date:** 08/2025
Bachelor's degree | **GPA:** 4.0 of a maximum of 4.0 | **Credits Earned:** 109
Major: Software Engineering | **Honors:** Summa Cum Laude
Relevant coursework: Data Structures & Algorithms, Database Management Systems, Operating Systems, Software Verification & Validation, Software Project & Process Management, Calculus III

WORK EXPERIENCE

Software Development Co-op Team Lead | J Healthcare Initiative | Remote **08/2024 – 05/2025**
Hours per week: 40

- Led a team of 4 developers using Agile/Scrum to deliver a data collection, annotation, and model-training platform for discriminatory language detection.
- Designed and built a cross-platform Electron application integrating Label Studio and Cloud Firestore to automate raw data ingestion and annotation workflows (GitHub: dlsmallw/J-Initiative-Web-Scraper).
- Engineered an end-to-end pipeline using Python, PyTorch and Hugging Face (Transformers/Datasets) to automate tokenization, validation, and fine-tuning of BERT language models on a dataset of 6,435 text samples (GitHub: dlsmallw/NLPinitiative).
- Streamlined data pipelines for Excel and CSV datasets using Pandas and Scikit-Learn, boosting data preparation efficiency.
- Developed and hosted an interactive Streamlit web application on Hugging Face Spaces to serve the fine-tuned BERT model for real-time inference and detection (GitHub: dlsmallw/NLPinitiative-Streamlit-App).

Contractor Security Operations Supervisor | United States Navy | Goose Creek, SC **11/2013 – 01/2021**
Hours per week: 50

- Oversaw the site contractor security program to ensure classified material access controls for uncleared contractors complied with federal regulatory standards.
- Managed the daily performance, accountability and training of 200+ personnel ensuring continuous coverage of all uncleared contractors conducting site military construction.
- Designed and developed an internal Microsoft Access application using VBA and SQL that automated workforce management and reporting, replacing manual tracking processes and eliminating redundant administrative workflows.

Nuclear Power Training Unit Staff Instructor | United States Navy | Goose Creek, SC **01/2016 – 02/2018**
Hours per week: 70

- Directly mentored, trained, and qualified 300+ junior personnel in complex systems engineering concepts, instrumentation control loops, and reactor plant operations.
- Analyzed and interpreted reactor plant parameters, complex schematics, and reactor safety systems to isolate faults and predict system behaviors during normal and transient reactor plant conditions.
- Conducted routine technical system and safety audits, ensuring strict adherence to standardized engineering protocols and zero-tolerance safety thresholds.
- Interpreted technical documentation, schematics, and system diagrams to support equipment operation, troubleshooting, and maintenance activities.
- Applied principles of digital and analog electronics, electrical theory, reactor instrumentation, and control systems while meeting rigorous academic and practical performance standards.
- Collaborated with multidisciplinary teams during reactor operations and maintenance exercises, emphasizing communication, accountability, and operational excellence.

Nuclear Electronics Technician (ETN) Trainee | United States Navy | Goose Creek, SC **11/2013 – 01/2016**
Hours per week: 50

PROJECTS

Cappy – Git & Scrum Analytics Dashboard
dlsmallw/Capstone-Automation-Tool | *dlsmallw/Cappy*
Python • Electron • React • TypeScript • SQLite

- Engineered a desktop analytics application that unified Git commit history and Scrum task data from GitHub/GitLab and Taiga, eliminating manual report creation and providing automated insights into project progress and team contributions.
- Automated data collection from GitHub/GitLab repositories by integrating multiple REST APIs and synchronizing project data into local SQLite databases using sqlite3 (Python) and better-sqlite3 (Electron), reducing API requests through local caching and enabling scalable analysis across 20+ repositories.
- Built Pandas data-processing pipelines that correlated 395 Git commits across three repositories with Scrum tasks to generate feature completion reports, workload distribution metrics, and repository-level contribution analytics; validated performance against public repositories containing thousands of commits to ensure scalability.
- Designed the original desktop interface using Tkinter, enabling users to interactively filter project data, generate reports, and audit repository information through a unified GUI.
- Re-architected the application from Python/Tkinter to Electron, React, and TypeScript, improving maintainability, enhancing the user experience, and delivering a modern cross-platform desktop application.

SKILLS & INTERESTS

- **Programming Languages:** Python, TypeScript, JavaScript, SQL, C++
- **Frameworks & Libraries:** React, Electron, Pandas, PyTorch, Hugging Face, Scikit-Learn, Streamlit
- **Databases:** SQLite, Cloud Firestore
- **Developer Tools:** Git, GitHub, GitLab, VS Code
- **Skills:** REST API Design, Agile/Scrum, Data Analysis, Object-Oriented Programming, Desktop Application Development, Machine Learning
- **Interests:** Photography, Reading, Music, Movies, Traveling, Video Games
